Power ease

Introducing the POWER EASE engine designed for the BE line of power equipment. Our industrial grade OHV engines are built with quality and performance in mind and designed specifically for our new cold water pressure washers, industrial grade generators and water transfer pumps. Power Ease engines and equipment driven by Power Ease have been imported to North America for the past 6 years and are tested to the highest safety and performance standards, meeting the rigorous demands set by the EPA and CSA. Offering a high quality product with affordability in mind, the manufacturing arm of Power Ease produces more than 400,000 engines per year, and has earned large contracts with companies such as Fuji Industries (the parent company of Robin Subaru engines). Power Ease uses the most modern automated machinery to manufacture the engines and generators. POWER EASE is proving to be the go to company for import engines that both meet the quality a customer expects from us, while delivering equipment at a cost for today's price conscious consumer.

LARGE METAL GAS TANK
ALLOWS FOR EXTENDED
RUN TIMES

EASY ACCESS CHOKE,
THROTTLE AND FUEL
SHUT OFF

LARGE, DURABLE RECOIL
MAKES FOR EASY STARTING

OVER HEAD VALVE
DESIGN PROVIDES
BETTER FUEL
EFFICIENCY

A CAST IRON CYLINDER,
BORE AND STEEL FORGED
CRANKSHAFT ADD
PROTECTION UNDER LOAD

LOW OIL SHUTDOWN
