

PARTS LIST FOR
CW-6106-2MDK

[For parts Call 888-279-9274](tel:888-279-9274)

Engine Horsepower:	37.5
Engine Oil Grade:	SAE10W-30 CC/CD/CE
Engine Oil Capacity;	11 oz.
Pump Oil Grade:	Mi-T-M Pump Oil #AW-4085-0016
Pump Oil Capacity:	25 oz.
Nozzle Size:	5.0

This Parts Listing has been compiled for your benefit. You can be assured your Mi-T-M Cold Water Pressure Washer was constructed and designed with quality and performance in mind using over 25 years experience in the pressure washer business. Each component has been rigorously tested to insure the highest level of acceptance.

The contents of this Parts Listing are based on the latest product information available at the time of publication. Mi-T-M reserves the right to make changes in price, color, materials, equipment, specifications or models at any time without notice.

WARNING

THIS IS A PROFESSIONAL HIGH PRESSURE WASHER PRODUCING 6.3 GPM @ 6100 PSI. THIS WATER/PRESSURE COMBINATION IS CAPABLE OF CUTTING CONCRETE! **EXTREME CAUTION** SHOULD BE OBSERVED WHEN USING OR REPAIRING THIS UNIT! READ AND FOLLOW THE SAFETY WARNINGS LISTED BELOW BEFORE ATTEMPTING ANY REPAIRS ON THIS PRESSURE WASHER.

SAFETY WARNINGS

1. NEVER alter or modify the equipment. Be sure any accessory items and system components being used will withstand the pressure developed. Use only genuine Mi-T-M parts for repair of your pressure washer. Failure to do so can cause hazardous operating conditions and will VOID warranty.
2. Do not make repairs while the unit is running. Before servicing the unit, turn unit off, relieve the water pressure and allow the unit to cool down. Relieve all pressure in the air, the oil and cooling system before any line, fittings or related items are removed or disconnected. Be alert for possible pressure when disconnecting any device from a system that utilizes pressure. DO NOT CHECK FOR PRESSURE LEAKS WITH YOUR HAND!! High pressure spray can penetrate the skin causing serious injury or death!
3. NEVER make adjustments on machinery while the unit is connected to the engine without first removing the positive cable from the battery. Turning over the machinery by hand during adjustment or cleaning might start the engine and machinery with it, causing serious injury to the operator.
4. NEVER remove the radiator cap or the reserve tank cap while the engine is still hot. Failure to observe the precaution may cause hot water to gush out of the cap, which could scald the operator or bystanders.
5. Before testing the unit, ensure all protective covers are in place. After testing the machine, DO NOT leave the pressurized unit unattended. Shut off the unit and release trapped pressure before leaving.
6. DO NOT jump start the battery unless both batteries are of equal voltage and amperage.
7. NEVER run the unit with the governor disconnected or operate at excessive speeds.
8. Know how to stop bleed pressures quickly. Be thoroughly familiar with controls.
9. Service in a clean, dry, flat area. Be especially careful to properly dispose of any flammable materials.
